**The Princess Anne Garden Club's Resolution Opposing Offshore Oil and Gas Drilling and Seismic**

**Testing for Oil and Gas in the Atlantic**

The members of The Princess Anne Garden Club resolved on September 8, 2016 to oppose Offshore Oil and Gas Drilling in the Atlantic. The Princess Anne Garden Club has now resolved to oppose Seismic Testing for Oil and Gas in the Atlantic as well.

The Princess Anne Garden Club has worked for over 83 years to restore, improve and protect the quality of the environment through educational programs and action. We are known for our decades of work and funding in support of First Landing State Park, the Virginia Marine Science Museum and many other organizations across Virginia Beach.

The experience of Gulf States with oil and gas drilling operations and the Deepwater Horizon disaster lead us to voice our concerns about drilling in the Atlantic. The Virginia Beach Restaurant Association, the Virginia Beach Hotel Association, the Resort Advisory Commission, Lynnhaven River NOW and dozens of coastal communities along the East Coast have all stated opposition to proposed drilling in the Atlantic because of the risk for catastrophic oil spills and certainty of persistent release of toxic chemicals and routine oil spills of normal drilling operations. Construction of the infrastructure required to support drilling operations is also fraught with pollution both on-shore and in the water.

Tourism and our thriving fishing industry remain at the heart of our economy. The protection of our coastal waters and our land is critical to our environment and our quality of life. In Virginia Beach, supporting our clean environment and promoting our economy go hand in hand.

Gas and oil drilling risk jobs in tourism and supporting businesses, commercial fishing, the commercial shellfish industry, the health of wildlife, human health and quality of life. Seismic Testing for Oil and Gas pose risks of harm and death to ocean mammals and other sea life. These significant harms are not worth the risk. The lessons are clear in the Gulf States.
