

Maine's Pristine Waters Are At Risk

Stop Monster Fish Farms From Threatening Our Coast

American Aquafarms proposed an industrial salmon farm in Frenchman Bay, right next to Acadia National Park. This massive fish farm would pollute the bay and displace fishermen and lobstermen. We must protect our coast from projects like American Aquafarms that have no place in Maine's waters.

SCALE

If allowed, this would be the largest ocean-pen salmon farm in North America, covering a surface area the size of 15 football fields across two sites.

30 SALMON PENS

Two sites would house 15 salmon pens each with up to 742,000 fish per pen.

30,000 METRIC TONS

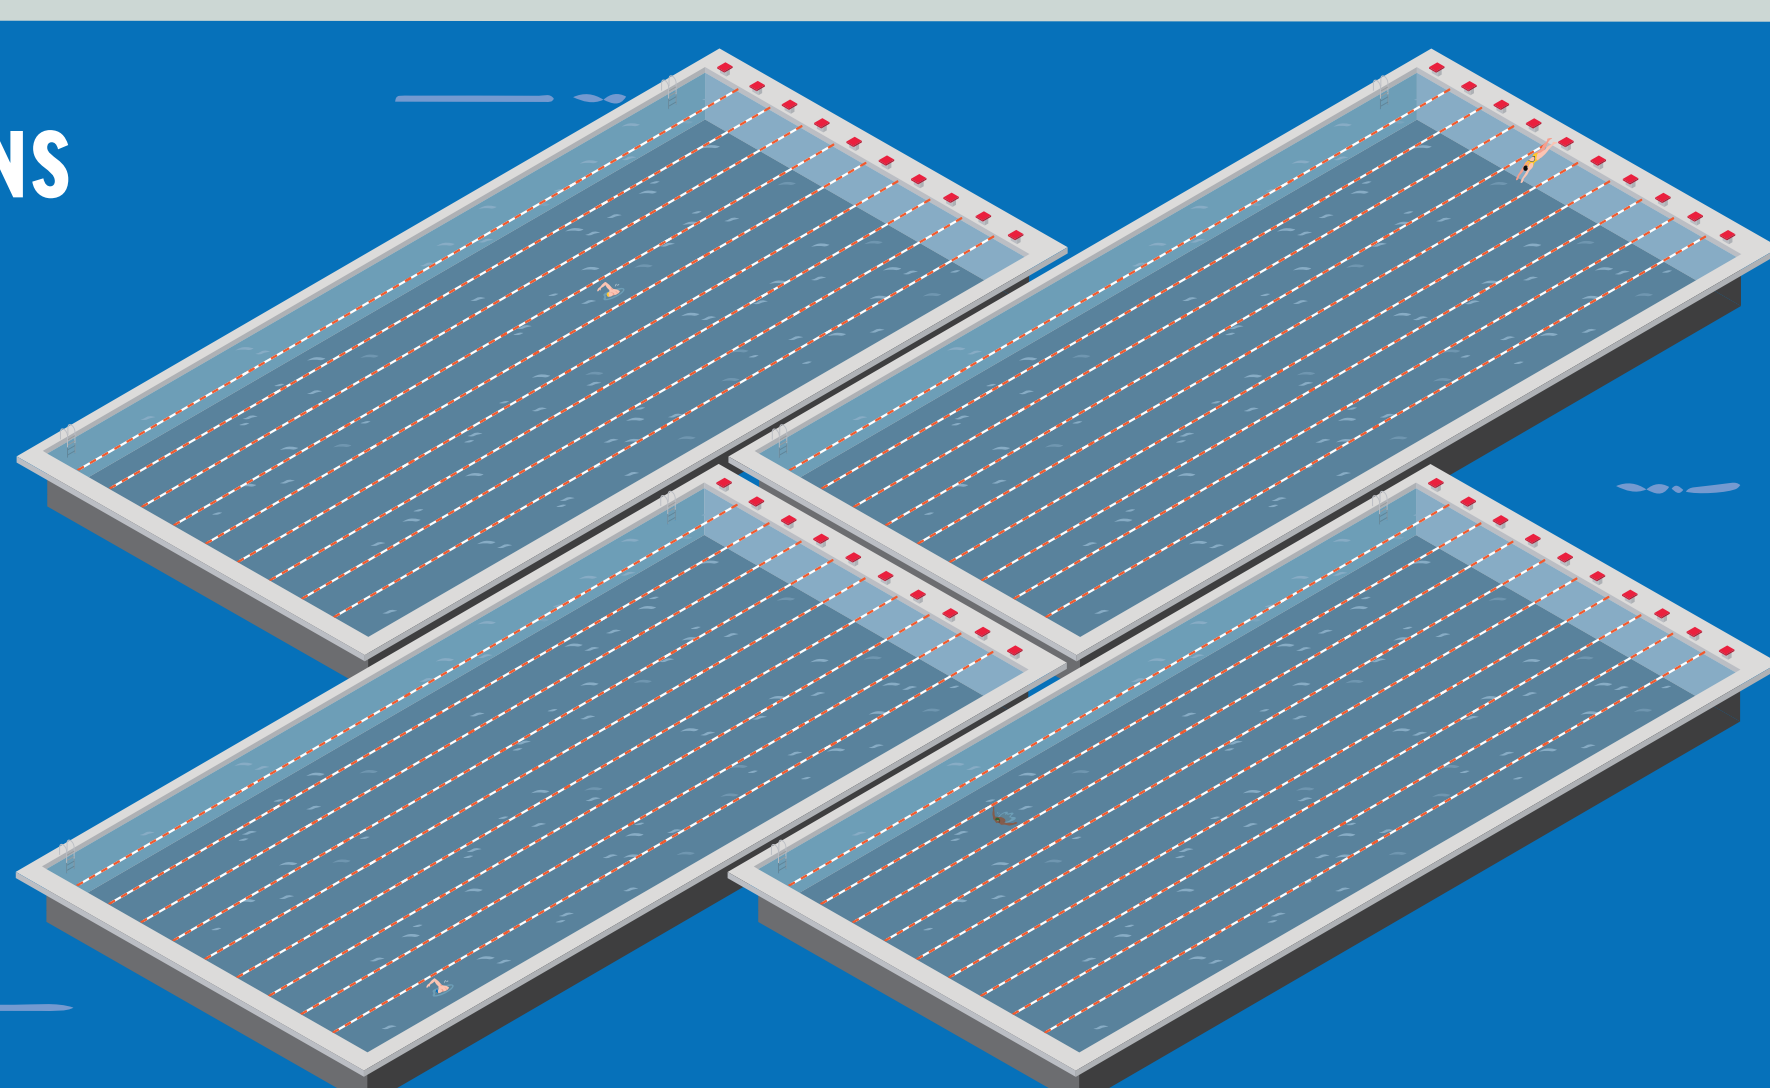

This farm would produce over 30,000 metric tons of salmon per year, making it one of the largest ocean-pen salmon farms in the world.

POLLUTION

Light, noise, and air pollution would turn a cherished oasis into something more resembling an industrial site.

4.1 BILLION GALLONS OF POLLUTED WASTEWATER PER DAY.

That's enough to fill four Olympic-sized swimming pools every minute.

100% of the dissolved nutrient waste would be pumped from the pens into the bay, including large amounts of nitrogen.

LOCATION

THE FARM WOULD COME WITHIN

½ MILE OF THE SHORES OF ACADIA NATIONAL PARK

The sites would displace the fishermen and lobstermen who currently work those waters. The farm's pollution over time could impact local species and threaten Frenchman Bay's fragile ecosystem.
