

# New York's Clean Coast Economy

New York's abundant ocean resources and vibrant coastal ecosystems are major drivers of the entire state's economy, providing livelihoods for thousands of Americans and defining the lifestyle of communities along the coast. Just outside of developed New York City is an Atlantic coast home to cozy beach towns, old fishing villages, sandy beaches with incredible surfing conditions, amusement hubs like Coney Island, and even protected shores like the Fire Island National Seashore. The maritime industry is a longstanding and defining characteristic for New York, an industry whose success is closely tied to clean waters and healthy marine ecosystems. The state has local commercial and recreational fishing economies that take advantage of productive fishing grounds for species like flounder, sea bass, scup, bluefish, menhaden, scallops and squid.

## What's at Risk?

New offshore drilling and exploration proposals pose a direct threat to coastal tourism and other local businesses that depend on a healthy and clean marine environment.

Offshore drilling threatens  
**OVER 414,000 JOBS**  
and roughly

**\$39 BILLION IN GDP**  
in New York for only

**10 DAYS'-WORTH OF OIL**  
and  
**8 DAYS'-WORTH OF GAS**

## FISHING, TOURISM & RECREATION

along New York's coast:

SUPPORT

**414,064  
JOBS**

GENERATE

**\$38.9 BILLION  
IN GDP**

## A Bad Deal for New York

*Risking New York's clean coast economy for very little offshore oil and gas would be a shortsighted and permanent mistake.*

At current national consumption rates the Atlantic's supply of undiscovered economically recoverable offshore oil and gas would only meet domestic oil demand for less than seven months and gas demand for less than six months. Off the coast of New York alone, the economically recoverable oil and gas resources would only meet demand for roughly 10 days and eight days respectively.

The risk of another catastrophe like the BP *Deepwater Horizon* oil disaster is too great to endanger New York's healthy ocean resources and thriving coastal economies. The blowout resulted in more than 200 million gallons of oil spewing into the Gulf of Mexico, with far reaching consequences that are still being discovered, including enormous economic losses, human health impacts, and disturbing effects on marine ecosystems. Impacts to fisheries could total \$8.7 billion by 2020, and roughly 10 million user-days of beach, fishing and boating activity were lost.

Oil spills do not recognize state boundaries; spreading slicks could hinder tourism, recreation and fishing economies all along the East Coast. Finally, the likely industrialization that goes hand-in-hand with offshore oil and gas development would dramatically alter the character of New York's coast. The addition of large scale oil refineries, and the associated pipelines required to pump oil, would irreversibly transform peaceful beach spots into oil towns scattered with drilling infrastructure.

Offshore drilling for oil and gas is a dirty and dangerous venture that would threaten New York's abundant ocean resources, which bring in consistent revenue year after year. Oil and gas are finite resources; when the oil runs out, so do the jobs.

Off New York's coast, the economically recoverable

# OIL & GAS

resources would only meet demand for roughly

# 10 DAYS

and

# 8 DAYS

respectively.

# IT'S NOT WORTH IT.

### TAKE ACTION

## Oppose Offshore Drilling and Seismic Airgun Blasting

Seismic airgun blasting is an extremely loud and harmful technology used to explore for oil and gas deep below the ocean floor. Seismic airgun blasting is the first step towards offshore drilling, and as history has taught us — when we drill, we spill. Seismic airgun blasts put marine life and coastal communities who rely on healthy oceans at risk, in addition to all the dangerous consequences of offshore drilling. Help protect the health of our oceans by stopping the expansion of offshore drilling and seismic airgun blasting.

The time to act is now. We must protect our coast, living ocean resources and local economies from the threat of new offshore drilling and exploration.
